

Ekso Rounds

Hello {{lead.First Name:default=edit me}}:

We've made some changes to ensure that everyone is receiving the Ekso Rounds on a consistent basis. Please confirm receipt of this email by clicking [here](#).

Please see your Clinical Tip of The Month Below!

Bring Along Training Program:

As your Ekso program expands, and you find that you would like to have more PTs trained in Ekso use, you may be interested in two options Ekso offers to certify more therapists. The first is to organize another full training from an Ekso Bionics certified trainer. The second is our Instructor Training Program. In this program, a level 2 certified PT may provide the training to their Physical Therapist (PT) colleague, so they are able to obtain an Ekso certification from the Ekso Bionics training team. The certified PT provides teaching on all aspects of Ekso use. This is often accomplished by having the trainee PT assist the certified therapist in their sessions, and then progress to leading sessions, as appropriate, under the direction of the certified PT. This provides trainees with the hands on experience needed for certification. Each new PT should complete multiple sessions with different patients, including new evaluations. These sessions must cover all features available on Ekso, both basic and advanced. If the goal is for the therapists to obtain a level 2 certification, they should first practice all decision making and then lead the decision making of the session, in preparation for safely and independently operating Ekso with patients.

Once the customer team is prepared for evaluation, a member of the Ekso Bionics training team will come to your clinic to provide an opportunity for your PTs to obtain certification based on their instructor training program readiness. The Ekso Bionics training team will determine the appropriate level of certification. At this time, the certification process will take:

- 1.5 days for 2 new PTs
- 3 days for 4 new PT's

If you feel this training is a good fit for your facility, there are a few steps to consider in preparation:

Prior to beginning the training, please contact a member of the Ekso Bionics training team to discuss the training process:

- Obtain a training checklist and session log
- Schedule a brief phone call with EB training team and the Level 2 PTs who will lead the Bring Along Training
- Obtain a copy of the appropriate training guide

We hope this program supports you in your continued development of your Ekso program. The regional sales manager in your area will help you determine the cost of the training, and which option may work best for your clinic. Please contact customerrelations@eksobionics.com to be connected with your training team member for further questions.

Have clinical questions? Please reply to EksoRounds@eksobionics.com to communicate with an Ekso Bionics clinical team member.
