MOVING AS ONE

Each year, upwards of 15 million people suffer from strokes and between 250,000 and 500,000 people suffer spinal cord injuries worldwide. Five million people per year survive a stroke and are left permanently disabled. For those who survive, the road to recovery is lifelong. Ekso Bionics empowers the medical community and helps clinicians rethink human limitations and reimagine physical therapy.

The Problem

How do we improve the quality of life for the millions of people who live with lower limb weakness or paralysis for years to come?

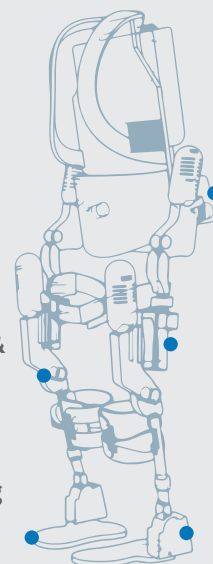

Our Solution

EksoGT™ facilitates early mobility with more steps in a shorter period of time by correcting posture, improving midline orientation, and achieving better balance awareness. EksoGT™ delivers cost-effective and unparalleled experience for both patients and therapists.

Your Results

EksoGT™ ensures your department is advancing the standard of care, provides innovative options for physical trainers in gait therapy and patients rehabilitate more effectively.

Specifications

Hip abduction/
adduction angle
Adjustable
hip width

Promotes
optimal hip &
knee angles

Adjustable
thigh length
